

NETWORK FAX MACHINE USING A WEB PAGE AS A USER INTERFACE

ABSTRACT OF THE DISCLOSURE

A network fax machine for faxing files received from a remote client includes a server unit and a fax control unit. The server unit sends a fax document form to a remote client and receives fax information from the remote client. The fax information includes an identifier corresponding to a destination fax machine and a file to be faxed to the destination fax machine. The fax control unit is configured to use the identifier to connect the network fax machine to the destination fax machine and configured to send the file to the destination fax machine by facsimile communication.
